Senior Software Engineer | .NET · Azure · Angular · Enterprise Systems

Profile

Senior Software Engineer with **8 years of experience** building, modernizing, and improving enterprise software across Germany, the UAE, and Syria. Strong in C#/.NET, Angular, Azure, microservices, databases, integrations, CI/CD, and software architecture. Experienced across backend, frontend, shared platform components, and business-critical services, with a track record of translating requirements into maintainable software and improving engineering quality.

Core Expertise

- C#, .NET / ASP.NET Core, Web APIs, EF Core
- Angular, TypeScript, React
- Microservices and distributed systems
- Azure Functions, Service Bus, App Service
- SQL Server, PostgreSQL, Redis, MongoDB
- RabbitMQ, Docker, CI/CD, GitHub Actions, Azure DevOps
- REST/SOAP integrations
- Unit Testing (xUnit), SOLID, Clean Code
- Reusable UI/component design
- Requirements analysis and stakeholder collaboration

Professional Experience

HILTES Software GmbH — Software Engineer

Germany | Apr 2026 – Present

- Designed and built **~30 reusable UI components from scratch**, replacing DevExpress ASP.NET/Blazor components and eliminating the need for commercial UI licenses across a five-developer team.
- Contributed to the architecture and business logic of **MasterDataService**, the core service of a microservices-based platform.
- Contributed across the **frontend, shared component library, and Identity Service**, working beyond a single application layer.
- Built a **CI quality/security pipeline** that detects unwanted AI-generated BOMs and artifacts in merge-request commits before they enter the codebase.
- Supported project planning through **scope definition, Gantt planning, Kanban, and RACI**, and contributed to technical and business discussions with the Product Owner and stakeholders.
- Implemented application features and performed code reviews focused on maintainability, quality, and security.

Self-Employed — Software Developer & Operations Consultant

Germany | Jun 2025 – Apr 2026

- Architected and implemented custom automation scripts and software solutions using C#/.NET and Python.
- Provided technical input for process optimization and digital-transformation work.

- Worked concurrently in a German operational environment, strengthening professional German communication and understanding of local business processes.

CARMA / Dubai Public Prosecution — Software Engineer

Dubai, UAE | Nov 2023 – Apr 2025

- Modernized legacy justice systems and migrated **5+ enterprise services** from VB.NET to modern .NET architectures.
- Worked directly with stakeholders to translate business requirements into technical specifications.
- Designed secure integration layers with Dubai Police for automated forensic-evidence processing.
- Improved engineering quality through unit testing, SOLID principles, and maintainable service design.

Abu Dhabi Ports — Full Stack Engineer

Abu Dhabi, UAE | Dec 2022 – Nov 2023

- Maintained and enhanced **6+ .NET Core microservices** supporting a trade and logistics platform used across global ports.
- Optimized complex SQL queries and reporting/data-extraction workloads, improving performance by approximately **20%**.
- Implemented workflow automation using Camunda and .NET.

Tech Unicorn — Software Engineer

Dubai, UAE | Sep 2021 – Dec 2022

- Provided technical leadership for two developers, including sprint coordination, mentoring, and code-quality guidance.
- Designed services in a .NET microservices environment using Azure services including Functions and Service Bus.
- Contributed to migration of enterprise projects to Microsoft Azure and implementation of CI/CD pipelines.
- Built Microsoft Teams applications and automated Active Directory workflows using Microsoft Graph API.
- Promoted Clean Code, SOLID, and microservices practices in an Agile/Scrum environment.

Syriatel Mobile Telecom — Full Stack Developer

Damascus, Syria | Oct 2018 – Feb 2020

- Designed and developed internal enterprise applications for a telecom environment serving more than **6 million customers**.
- Built a configuration-driven module for Customer Action Tracking that reduced repeated page-specific development.
- Delivered modules for KYC and prize-management systems using .NET and Angular technologies.

Education

B.Sc. Software Engineering and Information Systems — Al-Baath University, 2018

Decision Support Systems Program — Higher Institute for Applied Sciences and Technology, 2020–2021

German Language Preparation (DSH Course) — Paderborn University, 2025–2026

Languages

- Arabic — Native
- English — Full professional proficiency
- German — B2 / Professional working proficiency
